

# CHASSIS AND VEHICLE DYNAMICS TECHNOLOGY

## EDUCATION & TRAINING GUIDE

November 2017 – December 2018

### PLAN YOUR PROFESSIONAL DEVELOPMENT FOR 2018—INCLUDES 2018 SCHEDULED OFFERINGS

- **NEW!** Fundamentals for Vehicle Suspension Design | [Page 4](#)
- **NEW!** ADAS Application: Automated Emergency Braking | [Page 22](#)
- Advanced Vehicle Dynamics | [Page 6](#)
- Introduction to Brake Control Systems | [Page 28](#)
- Brake System Balance for Passenger Cars and Light Trucks | [Page 30](#)

**PLUS—Explore Related Chassis and Vehicle Dynamics Technology Resources on pages 36–37!**

## WHY SAE FOR PROFESSIONAL DEVELOPMENT?

Engineers and technical professionals in the ground vehicle and aerospace industries look to SAE as their trusted information resource and have done so for over 110 years. Get access to 300+ live online, in classroom, and on-demand learning programs. Programs in the technology areas shaping the automotive and aerospace industries. Courses designed to meet your specific needs with the right content to solve YOUR SPECIFIC CHALLENGES.

In this issue of the ***Chassis and Vehicle Dynamics Technology Education and Training Guide***, you'll find an extensive portfolio of courses designed to keep you ahead of the industry.

**PLUS—don't miss the suggested Related Chassis and Vehicle Dynamics Technology Resources on page 36!** We've selected key SAE books, standards, journals, technical events, and other resources to further your professional development and deepen your technical knowledge.

### EXPLORE THE FOLLOWING TOPICS IN THIS ISSUE OF THE CHASSIS AND VEHICLE DYNAMICS TECHNOLOGY EDUCATION & TRAINING RESOURCE GUIDE:

- Active Safety Systems
- Heavy Vehicle Handling
- Brakes and Braking Systems
- Suspension Systems
- Tire Mechanics

#### EARN A CERTIFICATE OF ACHIEVEMENT FROM SAE

SAE multi-course certificates provide an outline of courses designed to extend your understanding in a specific technology area. When reviewing SAE education and training material, watch for the certificate icon. It indicates which courses are part of an SAE multi-course certificate program. For a complete list of programs, visit [training.sae.org/credentialing/certificate](https://training.sae.org/credentialing/certificate).

#### WHY SAE? WHAT OUR CUSTOMERS ARE SAYING

*"My overall understanding of vehicle dynamics has dramatically improved. I can now more confidently relate what I feel as a driver to what the vehicle is actually doing. Exactly what I came here for!"*

(In reference to Applied Vehicle Dynamics - page 8)

**Robin Warner**

Systems Calibration Engineer - TRW Automotive

*"This class strengthened the things I knew and opened the door to so many more ideas and concepts I hadn't been exposed to in the automotive industry."*

(In reference to Advanced Vehicle Dynamics for Passenger Cars and Light Trucks - page 6)

**Dan Santiso**

Engineering - Steering Dynamics, Honda R&D Americas, Inc.

## A LEARNING FORMAT TO FIT EVERY NEED

As the world's leader in offering access to the most extensive, multi-sector source of knowledge and expertise, SAE International provides the mobility engineering training and education needed to turn your challenges into solutions.

### What is your learning need?

SAE International offers a variety of learning formats to accommodate diverse learning styles. Explore classroom, live and online, and on demand courses.

Many courses are offered in multiple formats to fit your exact need. Be sure to watch for the icons that identify the format available for each course.

Seminars or workshops available as similar live, online Web Seminars or on demand courses, will feature icons and information about the schedule and fees for all platforms.

## CATALOG KEY

Look for the icons below included with the course descriptions. The icons indicate delivery formats for the course and whether the course is part of an SAE Certificate program.

Many courses are available in multiple formats. In addition to finding courses that fit your technology need, look for courses with icons that fit the way you want to learn.

### CLASSROOM

Indicates that course is an instructor-led seminar or workshop offered in a classroom setting

### LIVE ONLINE

Indicates this course is an instructor-led Web Seminar offered live and online via telephone and internet connection

### ON DEMAND

These offerings are available online anytime the participant would like to access the course through the internet

### CERTIFICATE

This icon indicates that this course is part of an SAE International curriculum-based, multi-course certificate

### ACTAR LOGO

This icon indicates the course is an ACTAR approved course. For more information on ACTAR and ACTAR accredited courses, visit [training.sae.org/seminarsinfo/actar](http://training.sae.org/seminarsinfo/actar)

As an IACET Accredited Provider, SAE International offers CEUs for its programs that qualify under the ANSI/IACET Standard.

## SAE CUSTOMER SERVICE

Contact SAE Customer Service for any questions concerning schedules, fees, locations or registration.

1-877-606-7323 (US and Canada)  
or +1724-776-4970  
or [CustomerService@sae.org](mailto:CustomerService@sae.org)

# TABLE OF CONTENTS

## **3 VEHICLE DYNAMICS CERTIFICATE PROGRAM**

### **4 VEHICLE DYNAMICS AND HANDLING**

- 4 NEW! Fundamentals of Vehicle Suspension Design Seminar
- 6 Advanced Vehicle Dynamics for Passenger Cars and Light Trucks Seminar
- 8 Applied Vehicle Dynamics Seminar
- 10 Basic Tire Mechanics and Inspection Seminar
- 12 Fundamentals of Steering Systems Seminar
- 14 The Tire as a Vehicle Component Seminar
- 16 Tire and Wheel Safety Issues Seminar
- 18 Vehicle Dynamics for Passenger Cars and Light Trucks Seminar and e-Seminar
- 20 Tire Forensic Analysis Seminar

### **21 BRAKES AND BRAKING SYSTEMS**

- 21 Brake Friction Materials: Testing, Quality and Selection Seminar
- 22 NEW! ADAS Application: Automated Emergency Braking Seminar
- 24 Brake Noise Problem Resolution Seminar
- 25 Hydraulic Brake Systems for Passenger Cars and Light Trucks Seminar
- 26 Commercial Vehicle Braking Systems Seminar
- 28 Introduction to Brake Control Systems: ABS, TCS, and ESC Seminar and e-Seminar
- 30 Brake System Balance for Passenger Cars and Light Trucks Seminar
- 32 Introduction to Brake Noise, Vibration, and Harshness Seminar

### **34 LIVE LEARNING SCHEDULE**

### **36 RELATED CHASSIS AND VEHICLE DYNAMICS TECHNOLOGY RESOURCES**

To help you better plan your training, we schedule live course offerings as far in advance as possible. The content in this resource guide reflects the most accurate information available at the time of publication. Rarely, unforeseen circumstances may force a change to the schedule. Early registration ensures that you not only have a spot in your selected course but are notified of any changes. For the most-up-to-date listing of scheduled courses, visit [training.sae.org/calendar/](https://www.training.sae.org/calendar/). SAE International reserves the right to cancel offerings and cannot be held responsible for costs incurred beyond registration fees.

# VEHICLE DYNAMICS CERTIFICATE PROGRAM

Designed to equip engineers with key vehicle dynamics and handling theory and application from a systems perspective, the objective of this program is for engineers to understand the interaction and performance balance between the major vehicle subsystems. The program design requires completion of fundamental and advanced-level vehicle dynamics theory and application courses with three elective courses that best suit an individual's interest areas or engineering emphasis.

The courses do not have to be taken in any specified order, although the Required Courses are good starting points if they can be scheduled and completed prior to the electives. The entire program must be completed within five years.

Successful completion of this multi-course certificate program equates to eight graduate credits towards the SAE/Kettering University 20-credit Certificate in Automotive Systems and Kettering's 40-credit M.S in Mechanical Engineering. Visit [training.sae.org/credentialing/ceu/kettering\\_cp.htm](http://training.sae.org/credentialing/ceu/kettering_cp.htm) for more information.

## REQUIRED COURSES

- *Vehicle Dynamics for Passenger Cars and Light Trucks Seminar* or e-Seminar - see course description on page 18
- *Advanced Vehicle Dynamics for Passenger Cars and Light Trucks Seminar* - see course description on page 6

## ELECTIVES INCLUDE:

- *Applied Vehicle Dynamics Seminar* - see course description on page 8
- *Hydraulic Brake Systems for Passenger Cars and Light Trucks Seminar* - see course description on page 25
- *Commercial Vehicle Braking Systems Seminar* - see course description on page 26
- *Introduction to Brake Control Systems: ABS, TCS, and ESC Seminar* or e-Seminar - see course description on page 28
- *High-Performance Brake Systems Seminar* - see course description online at: [training.sae.org/seminars/c0718/](http://training.sae.org/seminars/c0718/)

Courses no longer offered by SAE are still eligible if taken within the allowed time frame:

- *Fundamentals of Heavy Truck Dynamics Seminar*
- *Applied Heavy Duty Truck Dynamics Seminar*
- *Chassis and Suspension Component Design for Passenger Cars and Light Trucks Seminar*

**Learn more about the Vehicle Dynamics Certificate Program and view the complete list of courses available. Visit [training.sae.org/credentialing/certificate/vehicledynamics.htm](http://training.sae.org/credentialing/certificate/vehicledynamics.htm)**

# NEW! FUNDAMENTALS OF VEHICLE SUSPENSION DESIGN

Suspension component design continues to move toward mass and cost efficient designs with high levels of stiffness being essential to achieving design requirements. Mass, cost and stiffness are expected to become increasingly important with higher fuel economy requirements, alternative energy sources and the move to autonomous vehicles. This course emphasizes the basic tenets of suspension design enabling strategically important product trends.

This seminar will be helpful to individuals interested in enrolling in other SAE seminars such as *Vehicle Dynamics for Passenger Cars and Light Trucks* (page 18), or *Advanced Vehicle Dynamics for Passenger Cars and Light Trucks* (page 6)

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Discuss the basic attributes of suspension design
- Evaluate various suspension types, identifying advantages and tradeoffs
- Convey an understanding of vehicle level boundary conditions for suspension geometry
- Analyze suspension designs and how they affect vehicle performance
- Assess the basics of ground lines and tire envelopes on vehicle design

## WHO SHOULD ATTEND

This seminar is designed for automotive engineers with a need to understand the basics of suspension design as well as suspension integration into the vehicle environment. The course is intended for both OEM and Supplier Engineers working in applications, materials, product design, development, testing, simulation and/or research.

## CONTENT HIGHLIGHTS

- Suspension's role in the vehicle
- Front and rear suspension types
- Vehicle packaging
- Suspension geometry and alignment
- Tire envelopes and ground lines
- Vehicle dynamics and NVH

## INSTRUCTOR

**William Pinch**  
Industry Consultant

The design and development of vehicle suspensions significantly influences vehicle handling and ride comfort. Suspension geometry is the foundation of vehicle performance from which high-confidence suspension components and tunings can be developed.

### I.D.# C1618

#### SCHEDULE

February 21-22, 2018  
Troy, Michigan

April 9-10, 2018

Detroit, Michigan- *held in conjunction with WCX™: SAE World Congress Experience*

August 22-23, 2018  
Troy, Michigan

December 6-7, 2018  
Troy, Michigan

#### FEES

List: \$1,370

#### Members

Classic: \$1,233

Premium: \$1,165

Elite: \$1,096

# NEED TO TRAIN YOUR WHOLE TEAM?

Bring SAE education and training to your location. Get variety, customization, quality and convenience. SAE International Corporate Learning advisors work with you to determine the best options to meet YOUR specific training challenge AND develop solutions to fit your budget and your schedule.

## **Through SAE Corporate Learning Solutions you can:**

- Select a SAE course for delivery at your site
- Purchase a corporate subscription for a few courses or the entire library of over 50 online courses (350+ hours of content available)

Contact SAE Corporate Learning Solutions today to discuss how SAE can best meet your training needs.

**[training.sae.org/corplearning](https://training.sae.org/corplearning)**

**SAE INTERNATIONAL  
CORPORATE LEARNING SOLUTIONS**

# ADVANCED VEHICLE DYNAMICS FOR PASSENGER CARS AND LIGHT TRUCKS

Governing state-space equations with transfer functions for primary ride and open loop handling will be developed & analyzed. Building on the analysis of the state space equations, common physical tests and their corresponding CAE solutions for steady state and transient vehicle events will be presented. The “state-of-the-art” of vehicle dynamics CAE will be discussed. Common lab and vehicle tests and corresponding metrics used to assess chassis system and vehicle performance will be discussed in great detail. Hands-on workshops using CARSIM™ vehicle dynamics simulation software will help reinforce the material. Significant time will also be dedicated to the use of design of experiments (DOE) as a tool to assist in the analysis and optimization of chassis systems for multiple vehicle responses.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Apply vehicle dynamics theory to practical evaluation and measurement
- Use governing state space equations and transfer functions to determine the effect of key parameters on primary ride and open loop handling
- Describe the current “state-of-the-art” of vehicle dynamics CAE
- Articulate various types of vehicle dynamics models
- Recognize kinematics and compliance (K&C) lab tests commonly used to quantify chassis system performance
- Identify and evaluate important K&C metrics used in vehicle dynamics development
- Identify and utilize important vehicle tests commonly used in industry to evaluate ride, steering and handling performance
- Relate chassis system characteristics to vehicle dynamic performance
- Utilize vehicle dynamics CAE software for the simulation of common physical lab and vehicle tests
- Apply design-of-experiments (DOE) to vehicle dynamics development

## WHO SHOULD ATTEND

This seminar is designed for automotive engineers in the vehicle dynamics, chassis, suspension, steering and braking fields who work in product design, development, testing, simulation or research.

“This class strengthened the things I knew and opened the door to so many more ideas and concepts I hadn’t been exposed to in the automotive industry.”

### Dan Santiso

Engineering – Steering Dynamics  
Honda R&D Americas, Inc

## CONTENT HIGHLIGHTS

- Modeling Primary Ride Dynamics
- Modeling Vehicle Handling Dynamics
- Introduction to Vehicle Dynamics CAE
- Measurement and Simulation of Suspension Kinematics and Compliance (K&C)
- Measurement and Simulation of Primary Ride
- Measurement and Simulation of Acceleration and Braking
- Measurement and Simulation of Steering
- Measurement and Simulation of Open Loop Handling
- Measurement and Simulation of Closed Loop Handling
- Design of Experiments (DOE) Applied to Vehicle Dynamics Development
- CarSim™ Exercises--Primary Ride Simulation, Steering, Open Loop Handling, Closed Loop Handling, Primary Ride

## INSTRUCTORS

### Dr. Richard Lundstrom

Independent Research and Project Engineer

### Timothy Drotar

Product Development Engineer, Ford Motor Company

### SAVE EVEN MORE ON EDUCATION AND TRAINING FROM SAE

**SAE Members - have you already taken a Professional Development course in the last few months? You could qualify for an additional 20% off of a future course.**

SAE members who have completed an SAE training in the last 12-months can get an additional 20% off of additional courses if taken in the same 12-month period.

Call SAE Customer Service to register and get your discount! 1-877-606-7323 (1-724-776-4970 outside the U.S. & Canada). Please use promo code **FREQUENTPD** when registering.

# APPLIED VEHICLE DYNAMICS

While a variety of new engineering tools are becoming available to assist in creating optimal vehicle designs, subjective evaluation of vehicle behavior is still a vital tool to ensure desired braking, handling, and other dynamic response characteristics. In order to better prepare you for this task, this course offers study devoted to the key fundamental principles associated with longitudinal and lateral vehicle dynamics. Each classroom session is paired with an on-track exercise to immediately reinforce concepts with a dedicated behind-the-wheel driving session, effectively illustrating these principles in the real world.

Exercises build the bridge between vehicle dynamics theory and practical application by providing a rich academic underpinning and then reinforcing it with highly focused and relevant driving experiences. Significant technical skill-building is provided, with increased instructor supervised track time to further absorb the principles learned on days one and two. If your job description does require performance driving skills, the dynamic exercises on day three will lay a solid foundation on which you can independently refine your own skills.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Explain tire-road friction limits and compose the friction circle for a given vehicle system
- Compute fundamental braking response attributes
- Illustrate the physics of turning and calculate lateral weight transfer
- Estimate brake system balance and brake proportioning
- Measure and graph a vehicle's understeer gradient
- Analyze basic anti-lock brake system (ABS) operation
- Discuss the effectiveness and limitations of electronic stability control (ESC) systems
- Calculate the most efficient path for a vehicle to negotiate a given test maneuver
- Comprehend the subtle effects that vehicle positioning has on vehicle speed
- Predict what response characteristics can be influenced by vehicle state
- Define those vehicle dynamic attributes which can be impacted through vehicle selection

"You will never have a full understanding of vehicle dynamics without this course as a base. While the screeching tires and smoke add to the effect, the experience "sticks" in your head."

### Shad Tisdale

Research Engineer - Tire Mechanics  
Cooper Tire & Rubber Company

## WHO SHOULD ATTEND

This course has been developed for engineers and technical personnel involved in all fields related to the design or development of vehicle dynamics, vehicle braking systems, powertrain systems, chassis systems, or suspension systems. In addition, this course is valuable to those with component design responsibilities in brake, chassis, suspension, or tire disciplines who desire a fundamental background in vehicle dynamics with a practical driving linkage.

## CONTENT HIGHLIGHTS

- Longitudinal Slip and Weight Transfer
- Fundamentals of Straight-Line Braking
- Slip Angle and Transient Response
- Braking Stability
- Steady-State Cornering
- Combining Lateral and Longitudinal Slip
- Anti-Lock Brake Systems
- Electronic Stability Control
- Test Procedure Selection
- Test Procedure Sensitivity
- Test Vehicle Sensitivity
- Comparison Vehicle Evaluation
- Driving Exercises--brake in a turn; skidpad; avoidance; wet skidpad; path selection; path variation; low pressure; lapping

## INSTRUCTOR

**James Walker, Jr.**

Principal Engineer, Carr Engineering, Inc.

### SAE'S "TOTAL" STEM SOLUTION

We are the only U.S.-based engineering organization to offer a full continuum of Kindergarten-College (K-16) science, technology, engineering, and math education opportunities. Learn how you can get involved at [saefoundation.org](http://saefoundation.org).

## I.D.# C0414

### SCHEDULE

# BASIC TIRE MECHANICS AND INSPECTION

This course provides an introduction to basic tire mechanics, including materials, sidewall stampings, pressure, tread patterns, tire inspection and basic tire failure identification of passenger and light truck tires. Practical in nature and supplemented with samples and hands-on activities, the course will provide you with information that you can use immediately on-the-job and apply to your own vehicle. It serves as a good primer for the in-depth SAE *Tire Forensic Analysis* course.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Read the sidewall of a tire and explain all of the nomenclature
- Describe the various types of tread patterns and what they mean on a tire
- Describe what is inside the tire and how that relates to some of the sidewall stampings
- Photograph black objects and quickly inspect tires in the field
- Visualize and explain basic tire failures

## WHO SHOULD ATTEND

This course is extremely helpful for Accident Reconstructionist, Law Enforcement and those with a thirst for knowledge on tires. The materials are basic in nature and not intended for individuals with substantial tire knowledge and is not intended to teach tire design.

## CONTENT HIGHLIGHTS

- Tire Size
- Sidewall Stamping
- Inflation Pressure
- Load and Reserve Load
- Tire Terminology
- Tire Construction
- Tire Types and Tread Patterns
- Inspection and Photography in the Field
- Basic Failure Mode Identification

## INSTRUCTOR

**Thomas Giapponi**  
Industry Consultant

Practical in nature and supplemented with samples and hands-on activities, the course will provide you with information that you can use immediately on-the-job and apply to your own vehicle.

### I.D.# C1423

# SAE ENGINEERING ACADEMIES

Immersive training covering core engineering topics. Cost-effective and time-efficient educational programs taught by experts dedicated to helping the industry.

- Engineering Management
- Diesel Engine Technology
- Vehicle Noise Control
- Hybrid and Electric Vehicle
- Gasoline Engine Calibration
- Transmission

[training.sae.org/academies](https://training.sae.org/academies)

# FUNDAMENTALS OF STEERING SYSTEMS

Design and development of a modern steering system influences vehicle response, driver controllability, comfort, safety and fuel economy. In this interactive seminar, participants will analyze the steering system, from the steering wheel to the road wheel. The seminar will cover the anatomy and architecture of the lower steering system (wheel end suspension geometry, linkages and steering gear), its effect on vehicle response, and how a force at the contact patch is translated to a torque in the steering wheel. The anatomy and architecture of the upper steering system (steering column and intermediate shaft), including the topic of non-uniformity and the role of the upper steering in the occupant protection system will also be explored.

Significant time will be devoted to the generation of power assist, either by way of a conventional hydraulic power steering (HPS) or electrically power assisted steering (EPAS). Topics include system anatomy/architecture as well as the effect of the system on fuel economy. The seminar will finish with a discussion of common steering objective tests and how the kinematics, compliances, friction and power assist affect steering response and torque feedback. Students will have the opportunity to participate in exercises throughout the seminar, culminating in a final project where they will calculate an assist curve for both a HPS and an EPAS system.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Identify common steering and suspension system architectures
- Compare and contrast different types of steering gears
- Describe the function of the steering column and intermediate shaft subsystem
- Describe the influence of system tuning on steering response and torque feedback
- Compare and contrast different types of power assist systems
- Describe the effect of power steering on fuel economy
- Calculate important parameters that affect steering response and torque feedback
- Describe some of the features of advanced steering systems

## WHO SHOULD ATTEND

Automotive engineers in the vehicle dynamics, chassis, suspension, steering and chassis controls fields who work in product design, development, testing, simulation or research.

“Tim provides a very thorough overview of common steering systems in a practical, easy to understand, hands on manner.”

### Phil Kling

Manager, Product Investigations  
General Motors of Canada LTD.

## CONTENT HIGHLIGHTS

- Introduction—elements of the steering system; coordinate systems
- The Lower Steering System
  - Kingpin axis
  - Linkages/steering geometry
  - Steering gear anatomy
- The Upper Steering System (steering column & intermediate shaft)
  - Anatomy & architecture
  - Non-uniformity
  - Role of the upper steering system in occupant protection system
- Power Assist Systems
  - Hydraulic power assist
  - Electro-hydraulic assist
  - Electric power assisted systems
- Effect of steering system design on vehicle level performance
  - Low-speed and high-speed
  - Error states
- Advanced Steering Systems
  - Driver assistance features
- Classroom exercises

## INSTRUCTOR

### Timothy Drotar

Senior Research Engineer,  
Ford Motor Company

## VOLUNTEER TODAY

SAE offers a host of rewarding volunteer opportunities for individuals who want to get involved. Whether you have a little or a lot of time to give, there are a wide variety of projects from which to choose:

Here's how it works:

- Go to the Member Connection at [connection.sae.org](http://connection.sae.org)
- Select "Volunteer Opportunities" from the Volunteer drop down at the top of the page and sign-up for the opportunities that work for you
- Or, opt into the volunteer pool to be matched with options based on criteria you provide; you'll also receive alerts on future openings

# THE TIRE AS A VEHICLE COMPONENT

The principal functions of the pneumatic tire are to generate driving, braking, and cornering forces while safely carrying the vehicle load and providing adequate levels of ride comfort. This seminar explains how tire forces and moments are generated under different operating and service conditions and, in turn, demonstrates how these forces and moments influence various vehicle responses such as braking, handling, ride, and high-speed performance. The content focuses on the fundamentals of tire behavior in automobiles, trucks, and farm tractors, but also includes experimental and empirical results, when necessary.

*The Pneumatic Tire*, a 700-page E-book on CD, edited by Dr. Joseph Walter and Alan Gent is included in the course material.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Explain the force and moment generating behavior of tires as related to construction, materials, and operating conditions
- Predict vehicle response based on tire characteristics using basic laws of mechanics supplemented by experimental results as necessary

## WHO SHOULD ATTEND

This course is designed principally for technical professionals in the automobile, tire, and wheel industries and their suppliers. In addition, some case studies and examples involve truck, agriculture, and aircraft tires.

## CONTENT HIGHLIGHTS

- Longitudinal Tire Properties
- Lateral Tire Properties
- Combined Longitudinal and Lateral Forces
- The Tire as a Spring
- Tire and Wheel Non-Uniformities
- Influences of Tire Properties on Vehicle Response
- Future Technological Developments

## INSTRUCTOR

### Gerald R. Potts

Principal, GRP Consulting  
Adjunct Professor, Mechanical Engineering,  
University of Akron

“Relevant introduction to the importance of tire properties as it relates to vehicle dynamics and performance.”

### David Klyde

Principal Research Engineer  
Systems Technology, Inc.

## **INTRODUCING SAE MOBILUS™**

### YOUR DESTINATION FOR MOBILITY ENGINEERING RESOURCES

The SAE MOBILUS™ platform is the place for the latest technical resources - including over 200,000 technical papers, standards, books, magazines and more. Get the same trusted content you need in a new user-focused tool.

Quickly and efficiently access information needed to solve project challenges or address knowledge gaps. The SAE MOBILUS platform enables you to:

- Facilitate an environment of collaboration across your organization
- Provide single-point access to all users
- Offer your constituents the latest, most-reliable content specific to the industry
- Deliver peer-reviewed research on a wide range of technologies

**For more information

# TIRE AND WHEEL SAFETY ISSUES

One of the most important safety critical components on cars, trucks, and aircraft is the pneumatic tire. Vehicle tires primarily control stopping distances on wet and dry roads or runways and strongly influence over-steer/under-steer behavior in handling maneuvers of cars and trucks. The inflated tire-wheel assembly also acts as a pressure vessel that releases a large amount of energy when catastrophically deflated. The tire can also serve as a fulcrum, both directly and indirectly, in contributing to vehicle rollover. This seminar covers these facets of tire safety phenomena. Engineering fundamentals are discussed and illustrated with numerous practical examples and case studies of current public interest.

*The Pneumatic Tire*, a 700-page E-book on CD, edited by Dr. Joseph Walter and Alan Gent is included in the course material.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Describe the most important performance parameters and operating conditions of pneumatic tires related to safety
- Use fundamental equations of engineering science to predict and/or explain tire-vehicle interactions related to safety

## WHO SHOULD ATTEND

This course is designed principally for technical professionals in the automobile, tire, and wheel industries and their suppliers. In addition, some case studies and examples involve truck, agriculture, and aircraft tires.

## CONTENT HIGHLIGHTS

- Vehicle accident statistics
- Role of the tire in accident prevention/causation
- Construction features
- Failure Modes
- Tire Grip and Related Phenomena
- Brake Performance
- The Tire as a Pressure Vessel
- Over-steering Vehicles
- Vehicle Rollover Analysis

## INSTRUCTOR

### Gerald R. Potts

Principal, GRP Consulting  
Adjunct Professor, Mechanical Engineering,  
University of Akron

“It has a great technical content as well as a very interesting historical background.”

# NEED TO TRAIN YOUR WHOLE TEAM?

Bring SAE education and training to your location. Get variety, customization, quality and convenience. SAE International Corporate Learning advisors work with you to determine the best options to meet YOUR specific training challenge AND develop solutions to fit your budget and your schedule.

## **Through SAE Corporate Learning Solutions you can:**

- Select a SAE course for delivery at your site
- Purchase a corporate subscription for a few courses or the entire library of over 50 online courses (350+ hours of content available)

Contact SAE Corporate Learning Solutions today to discuss how SAE can best meet your training needs.

# VEHICLE DYNAMICS FOR PASSENGER CARS AND LIGHT TRUCKS

This seminar will present an introduction to Vehicle Dynamics from a vehicle system perspective. The theory and applications are associated with the interaction and performance balance between the powertrain, brakes, steering, suspensions, and wheel and tire vehicle subsystems. The role that vehicle dynamics can and should play in effective automotive chassis development and the information and technology flow from vehicle system to subsystem to piece-part is integrated into the presentation. Governing equations of motion are developed and solved for both steady and transient conditions. Manual and computer techniques for analysis and evaluation are presented. Vehicle system dynamic performance in the areas of drive-off, braking, directional control and rollover is emphasized. The dynamics of the powertrain, brakes, steering, suspension, and wheel and tire subsystems and their interactions are examined along with the important role of structure and structural parameters related to vehicle dynamics. Physical experiments, applicable to vehicle dynamics are also introduced. Attendees will receive the *Bosch Automotive Handbook* and *The Automotive Chassis: Engineering Principles* by Reimpell, Stoll and Betzler.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Summarize how vehicle dynamics is related to the voice of the customer
- Identify important vehicle system parameters useful for effective application of vehicle dynamics to chassis development
- List and explain parameters that effect vehicle performance relative to drive-off, braking, directional control and rollover
- Identify physical measurements needed to effectively apply vehicle dynamics to passenger cars and light trucks
- Define the value of vehicle dynamics simulation in the development and evaluation of vehicles
- Explain the balance required between ride, directional control and rollover and the essential process for this balance to be obtained for marketplace vehicles

## WHO SHOULD ATTEND

Automotive engineers and quality professionals who work in product design, testing, quality, process or development will benefit from attending.

"The Instructor and seminar content were excellent! He kept it interesting and encouraged class participation. Well worth three days of my time!"

**Angela Amerson**  
Global Product Validation  
Manager  
General Motors

## CONTENT HIGHLIGHTS

- The Role of Vehicle Dynamics in Passenger Car and Light Truck Product Development
- Vehicle Dynamics and the Voice of the Customer
- Effective Metrics for Vehicle Dynamics
- Tire Fundamentals: Tire Wheel System Anatomy and Architecture, Tire Axis System, Parameters and Characteristics
- Elementary Tire Patch Forces and Moments: Forces and Moments at the Tire Contact Patch During Steady Braking, Steady Cornering and Steady Drive-Off Maneuvers
- Acceleration (Drive-Off) Performance
- Braking Performance
- Ride Fundamentals
- Cornering Fundamentals
- Suspension Systems
- Steering Systems
- Roll-Over Fundamentals
- Introduction to CAE Applications for Vehicle Dynamics

## INSTRUCTOR

### Richard Lundstrom

Independent Research and Project Engineer

### WHAT IS "ON-DEMAND"

SAE International on-demand offerings are a variety of full-length recorded seminars and Web Seminars, and short-course options that offer quick bits of learning – learning options that you can access anytime and anywhere you have a device with internet access. We are also proud to offer on demand courses from partner organizations like Ford, CALISO, and Industrial Metallurgists, LLC.

### I.D.# 99020

#### SCHEDULE

April 11-13, 2018

Detroit, Michigan - *held in conjunction with WCX™: SAE World Congress Experience*

August 6-8, 2018

Troy, Michigan

#### FEES

List: \$1,975

#### Members

Classic: \$1,778

Premium: \$1,679

Elite: \$1,580

#### THREE-DAYS/2.0 CEUS

**Get more information and register:**  
[training.sae.org/seminars/99020/](http://training.sae.org/seminars/99020/)

#### ALSO AVAILABLE AS AN ON DEMAND COURSE.

Convenient, portable, and with core content from the instructor-led seminar, this fifteen hour e-Seminar option offers an alternative way to receive the same instruction without the expense of travel and time away from the workplace. This course offers instruction and simulations divided into nineteen video modules and includes the same resources and handouts as the classroom option.

### I.D. # PD1307020N

# TIRE FORENSIC ANALYSIS

This course provides a detailed description of tire failure modes, their potential causes, identification, and the sometimes subtle nuances that go along with determination of tire failure. In addition, proper inspection techniques of tires will be discussed and samples will be available to reinforce the concepts learned.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Explain the methodologies of good tire inspection
- Describe tire failure causes
- Identify and determine root causes of tire failure

## WHO SHOULD ATTEND

This course is extremely helpful for Accident Reconstructionists, Law Enforcement, Warranty investigators and individuals who need to be able to explore and explain tire failures.

## PREREQUISITES

Individuals should already possess a basic knowledge of tires gained through work experience or through classes such as SAE's Basic Tire Mechanics course.

## CONTENT HIGHLIGHTS

- Belt Separation - Tread/Belt Detached & Belt Intact
- Belt Separation Locations and rate of growth
- Identification of Causes and Contributors to Belt Separation
- Overlaying and Time
- Impact
- Ozone Deterioration
- Mounting / Demounting Damage
- Physiological Damage
- Snags, Gouges, Cuts, Tears, Abrasions
- Cutting and Chipping (C&C)
- Poor Tire Storage
- Vehicle Caused Conditions
- Non-Belt Separation Types
- Runflats
- Liner Conditions
- Wheel Conditions
- Tire Location on the Vehicle
- Brassy Wire Failure
- Manufacturing Imprints
- Overlays
- Tire Examination

## INSTRUCTOR

**Thomas Giapponi**  
Industry Consultant

"Mr. Giapponi holds a great wealth of tire knowledge. I learned a great deal from his course."

**Caleb R. Williams**  
Mechanical Engineer  
Wolf Technical Services, Inc.

# BRAKE FRICTION MATERIALS: TESTING, QUALITY AND SELECTION

This seminar will provide an introduction to brake lining raw materials and formulation, manufacturing, quality control and testing. The course covers the critical elements that must be reviewed before arriving at a lining selection decision. Different classes of friction material and their use are defined.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Describe the principles of friction
- Define the basic elements of friction material formulations
- Identify the difference between OE and after-market friction materials
- Identify appropriate tests to distinguish the differences between friction materials
- Interpret friction material test results

## WHO SHOULD ATTEND

Engineers and technicians working for friction material manufacturers and suppliers to friction material industries will find this course valuable. Brake system designers, quality control auditors, product development engineers, application engineers, lab/bench/vehicle test technicians, managers/friction material sales and marketing will all gain valuable insight into this highly guarded industry.

## CONTENT HIGHLIGHTS

- Principles of Friction Materials
- Lining Coefficient of Friction
- Formulation/Compounding Friction Material
- Manufacturing Friction Material
- General Asbestos/Non-asbestos Friction Material Characteristics
- Friction Material Testing
- Edge Code
- Bench & Vehicle Tests
- Wheel Dust Test
- Government Regulations
- OE and After-market Friction Material Lining Selection
- Issues Facing Friction Material Industries
  - Copper in brake pads
  - CA intended regulations
- Workshop

## INSTRUCTOR

**Mohammad Vakili**  
Industry Consultant

The choice of brake friction materials varies per application, but each must have the appropriate coefficient of friction and be able to disperse large amounts of heat without adversely affecting braking performance.

# NEW! ADAS APPLICATION: AUTOMATIC EMERGENCY BRAKING

This one-day course is designed to provide an overview of the typical ADAS AEB system from multiple perspectives. A technical overview of the development cycle processes specific to AEB, including system level requirements and design architecture will be presented as well as design considerations for AEB from a functional safety (ISO-26262) perspective. A general overview of algorithm concepts for the various AEB subsystems will be demonstrated followed by a review of AEB system test and validation methods. Finally, discussion is facilitated toward understanding customer perception and acceptance of AEB at present. The participant should obtain a fundamental understanding of design principles and functional composition for a typical AEB system.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Describe AEB features / functionality as provided by most OEMs, including the capabilities and limitations of typical AEB systems
- Identify key principles of vehicle dynamics and system engineering disciplines which are integral to AEB system development
- Describe the general activities required for driving and braking tasks and comment on how these form the bases for AEB system requirements
- Identify AEB system architectures and subsystem composition and describe the function and purpose of each subcomponent
- Identify functional safety (ISO-26262) implications specific to AEB including review of basic hazard and risk analysis examples
- Explain algorithm concepts and functions for each of the AEB subsystems
- Critically examine various methods and levels of testing specific to AEB
- Describe the current state of AEB development from a consumer perspective

## WHO SHOULD ATTEND

This course is designed for engineers and managers within related professions who are looking for an in-depth technical overview of Automatic Emergency Braking systems.

Active Safety, Advanced Driver Assistance Systems (ADAS) are now being introduced to the marketplace as they serve as key enablers for anticipated autonomous driving systems. Automatic Emergency Braking (AEB) is one ADAS application which is either in the marketplace presently or under development as nearly all automakers have pledged to offer this technology by the year 2022.

## CONTENT HIGHLIGHTS

- Automatic Emergency Braking Overview
  - History: active safety origins
  - Key enablers for Automatic Emergency Braking (AEB)
  - AEB level of automation
  - AEB features and marketed benefits
- Primer: Basic Engineering Fundamentals
  - Vehicle dynamics; Wheel dynamics
  - System engineering requirements flow down
- AEB System Requirements
  - Basic driving tasks; Basic braking tasks
  - General & refined system requirements
- AEB System Architecture and Decomposition
  - Functional Architecture – sensing systems, warning systems, actuation systems
  - AEB operation modes
  - Physical Architecture – sensors, adaptive cruise control (ACC) ECU, body control module (BCM) ECU, electronic stability control (ESC) ECU
- AEB System Design: Safety
  - ISO-26262 framework
  - Hazard analysis and risk assessment exercise
  - AEB safety goals and requirements
  - Safety of the intended function (SOTIF) considerations
- AEB System Design: Performance Objectives
  - Sensing technology and implementation
  - Computational objectives: AEB ECU computing platforms
  - Human Machine Interface (HMI) warnings and considerations
  - Actuator objectives: braking actuator control design
- AEB System Test and Validation
  - AEB validation objectives
  - Subsystem testing
  - Vehicle level testing
- Conclusions and Future Direction
  - Market penetration
  - Customer acceptance
  - Incremental steps towards full autonomy

# BRAKE NOISE PROBLEM RESOLUTION

Brake noise is one of the highest ranked complaints of car owners. Grunts, groans, squeaks, and squeals are common descriptions of the annoying problem which brake engineers spend many hours trying to resolve. This course provides you with an overview of the various damping mechanisms and tools for analyzing and reducing brake noise. A significant component of this course is the inclusion of case studies which demonstrate how brake noise squeal issues have been successfully resolved.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Describe the various brake shim damping mechanisms
- Compare the various brake shims available in the market place
- Describe the various tools available to reduce brake noise
- Utilize lessons learned in various brake noise problem case studies

## WHO SHOULD ATTEND

Anyone involved in the resolution of brake noise problems will find this course helpful.

## CONTENT HIGHLIGHTS

- Brief Review of Brake Noise
  - Types of brake noises
  - Frequency range
  - Source/path/receiver
- Principles and Applications of Brake Shims
  - Damping
  - Role and purpose of brake shims
  - Different types of brake shims
  - Brake shims damping mechanisms
- Tools for Brake Noise Analysis/Reduction
  - Brake noise categorization
  - Solution strategy
  - Investigative tools -- Testing; Simulation
- Squeal
  - Brake pad design optimization
  - Pressure distribution optimization
  - Low frequency squeal
- Moan/Groan
  - After-stop noise program -- Problem identification; Transmission of the road to the lab; Measurement systems; Root cause analysis; Solution

## INSTRUCTOR

### Eric Denys

Vice President of Global OE Brake and AM Integration, Wolverine Advanced Materials

This seminar is designed for a wide range of personnel, from the brake test engineer who seeks to understand more about brake NVH, to the experienced brake NVH/design engineer who wishes to know more about potential solutions.

## I.D.# C0831

# HYDRAULIC BRAKE SYSTEMS FOR PASSENGER CARS AND LIGHT TRUCKS

This course analyzes automotive braking from a system's perspective, emphasizing legal requirements as well as performance expectations. Calculations necessary to predict brake balance and key system sizing variables that contribute to performance will be discussed. Major components of a brake system, including calipers, boosters, master cylinders, drum brakes, and park brakes are presented in detail highlighting the many design variations. An overview of the chassis control components and operating principles will be presented with an emphasis on ABS, traction control and stability control.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Design a brake system in compliance with Federal Motor Vehicle Safety Standards
- Calculate the ideal brake balance for a vehicle under any loading condition
- Calculate the actual brake balance and brake output for a selected set of brake components and evaluate the effects of changing component parameters
- Determine the effects of variation in component parameters on the system performance
- Describe the basic function of major brake components
- Describe various chassis control systems and their role in vehicle safety
- Determine the appropriate design variation for a particular application

## WHO SHOULD ATTEND

Engineers interested or responsible for the specification, prediction and validation of braking system performance. It will also benefit engineers responsible for brake component design.

## CONTENT HIGHLIGHTS

- System Level Requirements
- Brake Balance and System Output Calculations
- Workshop - design a brake system and predict the performance to key system level targets
- Component Functional Review
- Workshop - determine the effects of component variation on design
- Anti-lock Braking Systems
- Advanced Concepts and Technology

## INSTRUCTOR

**Thomas J. Hall**

Owner/Manager, MaxG Technology LLC

"This was an excellent overview of the topic, but it dealt with enough specifics to give me a good knowledge base to help me do my job better."

**Alan S. Halvorson**

Project Engineer

Harley-Davidson Motor Company

# COMMERCIAL VEHICLE BRAKING SYSTEMS

Increased public pressure to improve commercial truck safety and new stopping distance regulations have intensified the need to better understand the factors influencing heavy vehicle braking performance. To assist you and your organization in preparing for these new truck braking standards, this seminar focuses you on understanding medium-duty hydraulic brake systems and heavy-duty air brake systems and how both systems' performance can be predicted, maintained and optimized. The function and application of the major brake system components will be explained and you will discover how brakes, tires and roadways interact as a system. Federal braking regulations for both hydraulic and air brake vehicles will also be covered. You will receive the text, *Commercial Vehicle Braking Systems: Air Brakes, ABS and Beyond*, written by Leonard C. Buckman.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Design safe and efficient braking systems
- Test and measure braking performance
- Maintain and troubleshoot braking systems
- Comply with state and federal regulations on brakes
- Describe the brake implications of accident investigation

## WHO SHOULD ATTEND

This seminar is designed for engineers and technicians who are involved in the design, development and testing of heavy vehicle brakes. Fleet personnel involved with safety and brake system specification and maintenance, driver-trainers, and truck accident investigators will also find this course of value.

“An excellent course which provides a comprehensive overview of braking systems for Commercial Vehicles.”

**Earl Brown**  
Commercial Vehicle Sales  
Manager  
TMD Friction

## CONTENT HIGHLIGHTS

- Medium Truck Hydraulic Brake Actuation Systems
- Heavy Truck, Bus & Trailer Air Actuation Systems
- Brake Actuation Components - Function, Advantages/disadvantages, Applications
- Foundation Brakes - Cam, Wedge, Air Disc, Hydraulic Disc
- Braking Performance Fundamentals
- Maintenance and its Impact on Performance
- Brake Force Distribution
- Heavy Vehicle Dynamics and Tire Characteristics
- Thermal Considerations
- Tractor - Trailer Brake Compatibility
- Truck & Tractor Air Antilock Braking Systems
- Trailer Air Antilock Braking Systems
- Hydraulic Antilock Braking Systems
- Electronic Data Communication
- Automatic Traction Control Systems (ATC)
- Electronically Controlled Braking Systems (ECBS or "Brake-by-Wire")
- Electronic Stability Control and Roll Stability Control - Extended Applications of Electronics in Braking
- Brake Testing Procedures
- NHTSA and FMCSA Commercial Vehicle Brake Regulations

## INSTRUCTOR

### Paul Johnston

Senior Director of Compression and Braking, Meritor WABCO

# INTRODUCTION TO BRAKE CONTROL SYSTEMS: ABS, TCS, AND ESC

This comprehensive seminar introduces you to the system-level design considerations, vehicle interface requirements, and inevitable performance compromises that must be addressed when implementing electronic brake control systems.

The seminar begins by defining the tire-road interface and analyzing fundamental vehicle dynamics. Following an in-depth study of system electronics, hydraulic hardware, and sensor requirements, you learn about the control strategies employed by anti-lock brakes (ABS), dynamic rear proportioning (DRP), traction control (TCS), and electronic stability control (ESC) with strong emphasis placed on vehicle dynamic response. The seminar concludes with a study of unique applications, a look forward to advanced brake control system integration, and an overview of Federal Motor Vehicle Safety Standard 126. Over 500-pages of detailed course notes and illustrations are provided for on-the-job reference.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Analyze brake system design parameters and their vehicle performance effects
- Evaluate the compromises between stability, steerability, and stopping distance
- Identify the discrete mechanical components required for ABS
- Specify fundamental ABS performance attributes
- Calculate dynamic brake balance and explain the benefits of DRP
- Reconcile TCS performance expectations vs. method of implementation
- Define ESC metrics and ultimate dynamic limitations
- Assess features such as adaptive cruise control and brake assist
- Interpret federal requirements for the performance of ESC

## WHO SHOULD ATTEND

This course has been developed for engineers involved in all fields related to the design or development of vehicle dynamics, vehicle braking systems, powertrain systems, chassis systems, or suspension systems. In addition, this course can be valuable to those with component design responsibilities in brake, chassis, suspension, or tire disciplines.

“My colleagues and I are extremely satisfied with this seminar. It has opened our eyes to an entirely new aspect of braking systems! I truly feel more interested in braking systems, and the instructor lectures provided such a good perspective on the technical aspects of design. Life after the course produced motivation and encouragement to research more heavily in critical areas of study per our future dilemmas. Thank you!!!”

### William J. Burns

Product Engineer  
Cardone Industries,  
Brakes Division Product  
Engineering

## CONTENT HIGHLIGHTS

- Tire-Road Interface Characteristics
- Hydraulic Brake System Overview
- Stability, Steerability, Stopping Distance
- Mechanization of ABS
- ABS Sensor Overview
- ABS Performance
- DRP Performance
- Mechanization of TCS and ESC
- TCS and ESC Sensor Requirements
- TCS Performance
- ESC Performance
- Additional Features & Functionality
- Federal Motor Vehicle Safety Standard 126

# BRAKE SYSTEM BALANCE FOR PASSENGER CARS AND LIGHT TRUCKS

Designing a brake system requires the ability to balance a multitude of parameters against the required tradeoffs of system weight, system cost, and system performance. Understanding the basic fundamentals of how each brake component attribute contributes to the overall Force vs Deceleration behavior of the vehicle is critical to the design and release of a safe, legal and optimized system for today's vehicles. Brake balance also is a contributing factor to other chassis control and safety systems, such as regenerative braking, ABS, and electronic brake distribution (EBD).

This web seminar covers the fundamentals of the development of braking forces generated by the brake system and the theory and principals to properly balance a brake system in accordance with legal requirements. Brake balance modifiers will also be presented.

## LEARNING OBJECTIVES

By participating in this web seminar, you will be able to:

- Calculate the braking force on a vehicle from the installed brake components
- Determine the deceleration achieved by a vehicle for a given set of brake components
- Analyze and interpret the actual brake balance for a given vehicle and brake components
- Calculate the ideal brake forces required for a vehicle
- Evaluate tradeoffs between actual and ideal brake forces
- Calculate the impact of brake balance modifiers on vehicle braking performance

## WHO SHOULD ATTEND

This course is designed for engineers interested in or responsible for: the specification, prediction and validation of braking system performance; brake component design by providing insight into the interaction of components and the contribution to system level performance metrics; the tuning and calibration of Chassis Control Systems including ABS, TCS, ESP, ROM and Regenerative Braking Systems. Practical experience in the design or validation of brake or chassis control systems is helpful in getting the most from this course.

This live online course allows for a detailed presentation of this topic for those unable to participate in the longer and broader classroom seminar, *Hydraulic Brake Systems for Passenger Cars and Light Trucks*. See course information on page 25.

## CONTENT HIGHLIGHTS

- Brake System Sizing – Brake Force Determination
  - Applicable legal requirements for a brake system
  - Derivation of brake input force vs. vehicle deceleration relationship
- Actual Brake Force Balance and Considerations
  - Derivation of actual brake force balance
  - Determination of special actual brake balance conditions (front only, rear only)
- Brake Balance Analysis
  - Derivation of ideal brake force balance for a vehicle
  - Tradeoff analysis between actual brake force and ideal brake forces
  - Utilizing brake balance modifiers to refine the brake system

# INTRODUCTION TO BRAKE NOISE, VIBRATION, AND HARSHNESS

Brake Noise, Vibration, and Harshness (NVH) is recognized as one of the major problems currently faced by the automotive manufacturers and their suppliers, with customers warranty claims of more than \$100 million per year for each manufacturer. This seminar provides an introduction to brake NVH, including a concise summary of the various brake NVH problems, current lab and vehicle measurement techniques and SAE global standards which are utilized to characterize the noise correctly in order to get the best option/solutions quickly.

## LEARNING OBJECTIVES

By attending this seminar, you will be able to:

- Describe NVH and brake NVH
- Identify the various brake NVH problems
- Describe the components of a brake NVH dynamometer
- Configure and perform dyno and vehicle brake NVH tests measurements
- Utilize SAE J2521, the only international standard for brake NVH dynamometer evaluation
- Interpret basic noise and vibration data in the time and frequency domain
- Explain the premise behind various SAE Standards related to brake NVH

## WHO SHOULD ATTEND

The information in this course is relevant to a wide audience, from the brake test technician who seeks to understand more about NVH and brake NVH, to the experienced brake NVH engineer who wishes to know more about the details of the tests performed and the meaning of the results. Brake development and brake component engineers who are not familiar with brake NVH will also find the course beneficial.

## CONTENT HIGHLIGHTS

- Basics of Noise and Vibration
- Basics of Brake NVH
- Basic Dynamometer Testing
- Vehicle Brake Testing
- Brake SAE NVH Standards Currently Released and Under Development
- Introduction to Brake NVH Problem Resolution

## INSTRUCTOR

### Eric Denys

Vice President of Global OE Brake and AM Integration, Wolverine Advanced Materials

Customer warranty claims for Brake Noise, Vibration, and Harshness are more than \$100 million per year for each manufacturer.

### I.D.# C1337

#### SCHEDULE

March 22, 2018

Troy, Michigan

October 18, 2018

Palm Desert, California - held in conjunction with the SAE 2018 Brake Colloquium & Exhibition

#### FEES

List: \$810

#### Members

Classic: \$729

Premium: \$689

Elite: \$648

#### ONE-DAY/.7 CEUS

# NEED TO TRAIN YOUR WHOLE TEAM?

Bring SAE education and training to your location. Get variety, customization, quality and convenience. SAE International Corporate Learning advisors work with you to determine the best options to meet YOUR specific training challenge AND develop solutions to fit your budget and your schedule.

## **Through SAE Corporate Learning Solutions you can:**

- Select a SAE course for delivery at your site
- Purchase a corporate subscription for a few courses or the entire library of over 50 online courses (350+ hours of content available)

Contact SAE Corporate Learning Solutions today to discuss how SAE can best meet your training needs.

**[training.sae.org/corplearning](https://training.sae.org/corplearning)**

# 2017-2018 LIVE LEARNING SCHEDULE

for the complete and most up-to-date schedule visit  
[training.sae.org/calendar/](http://training.sae.org/calendar/)

## **Troy, MI, USA - SAE International Troy Office**

Dec 13-15 Weibull-Log Normal Analysis Workshop – I.D.# 86034  
Dec 18-20 Combustion and Emissions for Engineers – I.D.# 97011

## **JANUARY 2018**

### **Live Online**

Jan 10-19 New! Design for Additive Manufacturing: Towards End-Part Production – I.D.# WB1705  
Jan 10-19 Vehicle Sound Package Materials – I.D.# WB1204  
Jan 22-26 New! FEA Beyond Basics: Nonlinear Analysis – I.D.# WB1725  
Jan 22-Feb 2 Design of Experiments (DOE) for Engineers – I.D.# WB0932

## **Kirkland, WA, USA - MicroTek - Seattle**

Jan 30-31 Design Review Workshop – I.D.# C1306

## **FEBRUARY 2018**

### **Troy, MI, USA - SAE International Troy Office**

Feb 12-13 Control Systems Simplified – I.D.# C0525  
Feb 21-22 New! Fundamentals of Vehicle Suspension Design – I.D.# C1618  
Feb 28-Mar 1 A Familiarization of Drivetrain Components – I.D.# 98024

### **Live Online**

Feb 5-9 New! FEA Beyond Basics: Thermal Analysis – I.D.# WB1726  
Feb 19-Mar 7 Fundamentals of Geometric Dimensioning & Tolerancing (GD&T)

## **Livonia, MI, USA - Effective Training Inc. (ETI)**

Feb 12-13 The Role of the Expert Witness in Product Liability Litigation – I.D.# 92054  
Feb 13-15 Fundamentals of GD&T 2009 3-day – I.D.# ET1151

## **Durham, NC, USA - National Business Training (Raleigh)**

Feb 12-13 The Basics of Internal Combustion Engines – I.D.# C0103

## **Herndon, VA, USA - MicroTek - Herndon (Dulles)**

Feb 26-27 Introduction to Highly Automated Vehicles – I.D.# C1603

## **MARCH 2018**

### **Troy, MI, USA - SAE International Troy Office**

Mar 2 Fundamentals of Automotive All-Wheel Drive Systems – I.D.# C0305  
Mar 12-13 Practical NVH Signal Processing Methods – I.D.# C0431  
Mar 14-16 Fundamentals of Steering Systems – I.D.# C0716  
Mar 19-21 Gasoline Direct Injection (GDI) Engines – I.D.# C1009  
Mar 19-21 Advanced Vehicle Dynamics for Passenger Cars and Light Trucks – I.D.# C0415  
Mar 22 Introduction to Brake Noise, Vibration, and Harshness – I.D.# C1337  
Mar 22-23 Modern Fluids for Internal Combustion Engines: An Overview – I.D.# C0704  
Mar 23 Brake Noise Problem Resolution – I.D.# C0831  
Mar 26-27 Engine Failure Investigation and Analysis – I.D.# C1344  
Mar 27-28 Diesel Engine Technology – I.D.# 93014

### **Live Online**

Mar 6-13 Acoustic Fundamentals for Solving Noise and Vibration Problems – I.D.# WB1309  
Mar 20-22 Introduction to Powertrain Calibration Engineering – I.D.# WB1346

**Lombard, IL, USA - MicroTek - Chicago Metro**

Mar 6-7 Introduction to Commercial and Off-Road Vehicle Cooling Airflow Systems  
- I.D.# C0738

**Troy, MI, USA - SAE International Troy Office**

Mar 19-23 New! Transmission Engineering Academy - I.D.# ACAD11

**Troy, MI, USA - SAE International Troy Office**

Mar 26 New! High Voltage Vehicle Safety Systems and PPE - I.D.# C1732

Mar 27-29 Hybrid and Electric Vehicle Systems - I.D.# C1504

**Livonia, MI, USA - Effective Training Inc. (ETI)**

Mar 13-15 Fundamentals of GD&T 1994 3-Day - I.D.# ET2001

Mar 20-21 Advanced Concepts of GD&T 1994 2-day - I.D.# ET2411

Mar 26 Fundamentals of Shielding Design for EMC Compliance - I.D.#C0835

**Herndon, VA, USA - MicroTek - Herndon (Dulles)**

Mar 19-21 Injuries, Anatomy, Biomechanics & Federal Regulation - I.D.# 85049

**APRIL 2018****Troy, MI, USA - SAE International Troy Office**

Apr 3 Principled Negotiation - I.D.# C1602

Apr 4-6 Managing Engineering & Technical Professionals - I.D.# C0608

Apr 9-10 Fundamentals of Gear Design and Application - I.D.# C0223

Apr 16 Basic Tire Mechanics and Inspection - I.D.# C1423

Apr 17-18 Tire Forensic Analysis - I.D.# C1424

Apr 23-25 Hydraulic Brake Systems for Passenger Cars and Light Trucks -  
I.D.# C0509

Apr 30-May 2 Commercial Vehicle Braking Systems - I.D.# C0233

Apr 30-May 2 Strategic Leadership - I.D.# C0620

**Troy, MI, USA - SAE International Troy Office—held in Conjunction with the WCX™: SAE World Congress Experience**

Apr 9-11 Principles of Cost and Finance for Engineers - I.D.# C0828

Apr 12-13 Leading High Performance Teams - I.D.# C0410

**Detroit, MI, USA - Cobo Center—held in In Conjunction with the WCX™: SAE World Congress Experience**

Apr 8 Brake Friction Materials: Testing, Quality and Selection - I.D.# C1020

Apr 8 Success Strategies for Women in Industry and Business - I.D.# C1202

Apr 9 Reconstruction and Analysis of Rollover Crashes of Light Vehicles - I.D.# C1502

Apr 9-10 Automotive Lighting: Design and Technology - I.D.# C0202

Apr 9-10 Introduction to Brake Control Systems: ABS, TCS, and ESC - I.D.# C0315

Apr 9-10 Engineering Project Management - I.D.# 99003

Apr 9-10 Introduction to Highly Automated Vehicles - I.D.# C1603

Apr 9-10 New! Fundamentals of Vehicle Suspension Design - I.D.# C1618

Apr 9-10 Evaporative and Refueling Emission Control - I.D.# C0928

Apr 11 New! ADAS Application: Automatic Emergency Braking - I.D.# C1704

Apr 11-13 Vehicle Dynamics for Passenger Cars and Light Trucks - I.D.# 99020

Apr 12 Automotive Lighting: Testing and Requirements - I.D.# C0618

Apr 12-13 Design of Experiments - Basic Simplified Taguchi - I.D.# C0231

Apr 12-13 Introduction to Failure Mode and Effects Analysis for Product and Process -  
I.D.# C1201

Apr 12-13 Advanced Diesel Particulate Filtration Systems - I.D.# C0502

Apr 12-13 New! Introduction to Radar for Automotive Applications - I.D.# C1627

Apr 13 Emissions-Related OBD Systems: A Design Overview - I.D.# C0708

Apr 13 Automotive Lighting: LED Applications - I.D.# C0727

Apr 13 Reconstruction and Analysis of Motorcycle Crashes - I.D.# C1506

Apr 13 Emissions-Related OBD Systems: A Design Overview - I.D.# C0708

Enrich your professional development with these related chassis and vehicle dynamics technology resources from SAE.

### BOOKS

#### **CHASSIS DYNAMOMETER TESTING: ADDRESSING THE CHALLENGES OF NEW GLOBAL LEGISLATION**

This book analyses the main factors affecting a vehicle in order to closely reproduce them in a testing facility. It provides complete guidance on how these tests should be performed, including the requirements affecting the test cells themselves so that they can be fully optimized.

#### **AERODYNAMICS OF ROAD VEHICLES, FIFTH EDITION**

New Edition Features Updated & Expanded Information. The detailed presentation of fundamental aerodynamics principles that influence and improve vehicle design have made Aerodynamics of Road Vehicles the engineer's "source" for information. This fifth edition features updated and expanded information beyond that which was presented in previous releases. Completely new content covers lateral stability, safety and comfort, wind noise, high performance vehicles, helmets, engine cooling, and computational fluid dynamics.

#### **FUNDAMENTALS OF VEHICLE DYNAMICS**

This book attempts to find a middle ground by balancing engineering principles and equations of use to every automotive engineer with practical explanations of the mechanics involved, so that those without a formal engineering degree can still comprehend and use most of the principles discussed. Either as an introductory text or a practical professional overview, this book is an ideal reference.

#### **BOSCH AUTOMOTIVE HANDBOOK, 9TH EDITION**

Experts trust the well-founded and extensive expertise that can be found in this global best-seller, now in its 9th English Edition. Researchers and engineers in the automotive industry (as well as engineering students) consult it. Mechanics who are studying to become master craftsmen also use it as a reference work. The newest edition has been completely revised and enhanced to include the most recent developments in automotive technology. About 200 specialist authors contributed to this new version of every engineer's must-have reference.

### JOURNALS

#### **NEW JOURNALS. NEW PROGRAM. NEW WAY TO ACCESS**

New titles, improved submission processes, and the enhancement of overall quality with a rigorous peer review is taking the SAE Scholarly Journals program to the next level. In addition to the new program, customers can now access their journals on the SAE MOBILUS platform™, making exploring and accessing articles easier than ever.

#### **SAE INTERNATIONAL JOURNAL OF VEHICLE DYNAMICS, STABILITY, AND NVH**

This scholarly journal publishes peer-reviewed, original high-quality papers addressing dynamics, stability, and NVH science and technologies of ground, marine, and aerospace vehicles. The editorial scope covers all technical aspects of vehicle dynamics, stability, and NVH science and technologies.

**LEARN MORE ABOUT THESE RELATED CHASSIS & VEHICLE DYNAMICS TECHNOLOGY RESOURCES AT [go.sae.org/chassis\\_tech\\_resources](https://go.sae.org/chassis_tech_resources)**

## EVENTS

### SAE 2018 GOVERNMENT/INDUSTRY MEETING

January 24-26, 2018  
Washington, District of Columbia, USA

Attend to gain a critical understanding of new legislation and regulations on emissions control, safety, energy conservation issues, and more to plan your compliance strategies. Engage, network, and connect with technical authorities who are leading regulations, pending legislation, and the advanced technology to address critical compliance issues as we move forward toward zero emissions and zero fatalities. Build or grow relationships with other industry professionals to compare strategies and successes for dealing with legislation and regulations.

### SAE 2018 ADDITIVE MANUFACTURING IN MOTION SYMPOSIUM

March 13-14, 2018  
Cleveland, Ohio, USA

THE premier additive manufacturing event for the mobility industry. Join us to hear from technical experts from both automobile and aerospace OEMs and Tier 1 and 2 suppliers, as well as those experts from government and academia with a forum to communicate needs, research, development activities, and solutions that will enable all stakeholders an opportunity to maximize the many benefits of this continually evolving technology.

### WCX™: SAE WORLD CONGRESS EXPERIENCE

April 10-12, 2018  
Detroit, Michigan, USA

At *WCX™: SAE World Congress Experience* practical meets potential. The premier talent in the automotive and mobility industry converge to address current challenges, discover new avenues of exploration, and explore the promise of the future of transportation engineering in an interactive experience.

## STANDARDS

### JPAKS

JPaks are online annual subscriptions that provide a cost-effective and convenient way to access the 2,000+ individual standards in SAE MOBILUS pertaining to passenger cars, trucks, motorcycles, trailers, snowmobiles, agricultural tractors, and other ground vehicles. In addition, JPaks customers can now search and download any of the more than 2,600 historical versions of SAE Ground Vehicle Standards. With JPaks, you buy and download only as many standards as you need. Annual subscription “packs” currently include your choice of up to 10, 15, 25, 35, or 50 downloads.

### INDIVIDUAL STANDARDS

Individual SAE standards are always available for purchase.

### SAFETY TESTING AND PROCEDURES SUBSCRIPTION

The Safety Testing and Procedures subscription covers numerical methods used to process impact testing, failure detection, and standardized coordinated systems to ensure vehicle safety in commonly encountered collision configurations. This information will improve vehicle safety and methodologies that ensure safety systems respond promptly and correctly.

### SAE MOBILUS – YOUR ONLINE DESTINATION FOR MOBILITY ENGINEERING RESOURCES

Designed for mobility engineers and academics worldwide, the NEW SAE MOBILUS platform is the only solution for aerospace, automotive, and commercial vehicle engineering content - including technical papers, standards, books, magazines, and more.
